PROFESSIONAL SUMMARY

Backend Engineer with experience building production-grade microservices using Java and Spring Boot. Designed event-driven architectures with Apache Kafka, secured REST APIs using OAuth2 and Keycloak, and implemented polyglot persistence with PostgreSQL and MongoDB. Competitive programmer with 350+ algorithmic problems solved and a top 12.8% rank in CodeChef Starters 197.

EDUCATION

B.Tech in Information Technology — ABES Engineering College, Ghaziabad, Uttar Pradesh

November 2022 – July 2026 | CGPA: 8.21 / 10.0 (through 7th Semester)

EXPERIENCE

Analyst Trainee — Capgemini, Ghaziabad, Uttar Pradesh

January 2026 – May 2026

- Developed an HR Management Portal using Spring Boot, Spring Data REST, and Thymeleaf as the final project evaluation deliverable within a 6-member team.
- Authored 250+ unit and integration test cases covering repository and API layers, achieving complete test-cycle success across all modules.
- Built automated HTML, JavaScript, and CSS dashboards to visualize and distribute daily test-result reports to the team.
- Acquired hands-on experience in Java, Spring Boot, Microservices architecture, Docker, and AWS cloud services.

PROJECTS

AI-Powered Fitness Application

May 2026 | Java, Spring Boot, Microservices, Apache Kafka, Keycloak, Spring Cloud, React, Docker, PostgreSQL, MongoDB, Google Gemini API

- Architected a scalable fitness platform with 3 decoupled microservices (User, Activity, AI), enabling independent deployments and reducing inter-service coupling.
- Engineered an event-driven recommendation engine using Apache Kafka to process 500+ activity logs per minute asynchronously, reducing response latency by 40%.
- Secured 20+ REST API endpoints via Keycloak OAuth2 behind a Spring Cloud API Gateway, centralizing authentication and ensuring encrypted inter-service communication.
- Integrated Spring AI with Google Gemini to generate personalized fitness recommendations from user workout data in under 2 seconds per request.
- Implemented polyglot persistence using PostgreSQL for relational user profiles and MongoDB to store 10,000+ unstructured activity events.
- Centralized configuration for all microservices via Spring Cloud Config Server, reducing environment setup time across development and testing by 50%.

HR Management System

May 2026 | Team Project (6 members) | Java, Spring Boot, Spring Data REST, MySQL, JUnit, Thymeleaf

- Designed paginated REST APIs to map N-tier organizational charts, segregating manager profiles, subordinate lists, and hierarchy trees to minimize client-side rendering load.
- Validated all CRUD operations and entity relationships through comprehensive JUnit test suites for the repository layer, ensuring strict data integrity.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML, CSS, SQL

Frameworks and Libraries: Spring Boot, Spring Data REST, Spring Cloud API Gateway, Spring Cloud Config Server, Spring AI, Thymeleaf, React

Databases: PostgreSQL, MySQL, MongoDB

Tools and Platforms: Apache Kafka, Keycloak, OAuth2, Docker, AWS, Jenkins, Git, GitHub, IntelliJ IDEA, VS Code, Eclipse

ACHIEVEMENTS

- LeetCode maximum rating: 1602 | CodeChef maximum rating: 1438 | Codeforces maximum rating: 1012
- Ranked top 12.8% in CodeChef Starters 197, placing 3,594 out of approximately 30,000 participants.
- Solved 350+ algorithmic problems demonstrating strong proficiency in dynamic programming and subarray manipulation.

LEADERSHIP AND EXTRACURRICULAR

Overall Coordinator — SYC, ABES Engineering College

April 2024 – June 2025

- Coordinated large-scale campus events including International Yoga Day 2024 and 2025, Walkathon with 400+ participants, and Mental Wellness Seminars with 300+ participants.
